

### **P WAVE AFTER CARE**

Typically, there is minimal discomfort and recovery time after the P Wave procedure. Patients can return to their daily routine immediately after the procedure.

Some patients experience temporary redness, slight pain, or discomfort in the treatment area during and/or following a P Wave procedure.

Results vary from person to person. Additional treatments may be necessary to achieve your desired outcome.

To optimize results, we require you to complete all your P Wave sessions weekly.

Following the procedure, a gradual improvement in your ED should take place. You may start to see changes as early as a few days after the procedure.

This procedure is best combined with our other sexual wellness procedures for optimal results.

Schedule a one month and three month follow-up (after all your sessions have been completed) to review your clinical results and discuss the option of additional treatments to achieve the desired outcome.
