

### **B12 AFTER CARE**

There are no specific side effects from receiving a B12 injection. If you have enough B12 in your system, you will simply excrete the excess.

Potential complications can include irritation or bleeding from the injection site. If this does not resolve within the day, please call the office.

Your urine may be slightly pink for 1-24 hours after injection. This is normal.

You may otherwise go about your day regularly. There are no other precautions to take.

Call RejuvenationMD with any questions or concerns you may have after the treatment.
