

DEIRIVE PRE AND POST TREATMENT INSTRUCTIONS

Home care is an essential part of the process when doing aesthetic treatments. RMD has recently added DEIRIVE for an added value to some of our procedures. DEIRIVE consists of organic, plant-based stem cells that can be used to significantly increase hydration and blood flow to the scalp. It aids in the removal of dead cells from around the follicle and enhances the appearance of fuller, healthier hair. DEIRIVE increases Cytokeratin 15 proteins that are integral to the fortification of the bulb responsible for hair growth.

Below you will find your guide to applying your DEIRIVE serum at home.

PRE-CARE

Arrive at your appointment with clean hair, NO product.

IN OFFICE TREATMENT

1 syringe will be applied every 30 days in clinic. This occurs in months 1,2,3 and 6.

POST-CARE

You will begin your home serum regimen in between each clinic application. Start this the night of your first procedure.

1 ampule will be used a day, ½ in the am and ½ in the pm, or 1 full ampule once at night. If you have received a pump instead of the ampules, use 1-2 pumps once a day, enough to cover the affected area. This will not leave your hair greasy so it can be applied post shower.

After you receive 3 in clinic procedures, continue to use the DEIRIVE at home until the 6th month procedure is completed. You will need to continue to use DEIRIVE after this point as well and until the foreseeable future to maintain results and scalp health.
